### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Independent claim 51 is drawn to a rack for storing and routing cables, such as fiber optic and other cables associated with electronic equipment. The rack includes an upright frame and is configured attach to similar racks, if necessary, to provide for additional storage and routing. The rack of claim 51 includes an end cap (Figure 1, item 34), which represents the terminal end of a series of racks connected together. Similar racks are known in the prior art, including US Patent No. 6,614,978 to Caveney (see Fig. 8) (commonly owned with instant application) and US Patent No. 6,850,685 to Tinucci et al. The rack of claim 51 also includes a "pass-through tray having a base and sidewalls defining a front-to-back channel" whereby cables may be routed from the front of the rack to the rear of the rack in an orderly manner. The tray is shown in Figure 3 of the instant application, and it includes a generally open front portion that extends to a rear portion forming a trough that defines the "rear channel adjacent to and extending substantially perpendicular to the front-to-back channel." Cables are routed from the front to the rear of the rack via the tray, and then routed in a perpendicular direction via the troughs. Similar pass-through trays are shown in US Patent No. 6,614,878 to Caveney (Fig. 1, items 30 and 40) (commonly owned with instant application) and US Patent Application Publication 2004/0037533 to Knudsen (see Fig. 6).

The prior art does not, however, teach a "pass-through tray" having these features and also having a uniform width from it's front to rear, and an upstanding spool disposed in the center of the tray, which are shown in Figure 3 of the instant application.

The prior art that most closely discloses these features is US Patent No. 6,250,816 to Johnston et al. Johnston discloses a tray (Fig. 1, cabinet 11) that allows cables to be routed from one side of a rack to the other. Slack in the cables is managed in the interior portion of the tray via upstanding spools (Fig. 5, clips 72), and the cables enter and exit the tray via openings 27, 28, 29, 30, 31, and 32 (Fig. 3). Johnston et al. does not, however, disclose the tray having a uniform width from front to rear, or the clips being disposed in the center of the tray. Furthermore, although Johnston et al. teaches a rear channel defined by openings 27 and 28, he does not teach a front-to-back channel disposed perpendicularly to the rear channel. In other words, the tray of Johnston et al. does not permit cables to enter in a first direction, and exit in a second direction that is perpendicular to the first direction. Still further, Johnston et al. does not teach the tray in combination with other features of claim 51, such as a "plurality of spools at different elevations and an end cap.

Claim 65 sets forth a multiple-rack system, wherein each rack of the system is substantially similar to the rack of claim 51. Accordingly, claims 51, 65, and the claims depending therefrom are deemed allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JARED W. NEWTON whose telephone number is (571)272-2952. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Kramer can be reached on (571) 272-6783. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
